Objectives

A Full-Stack web developer seeking a position where I can contribute to achieving company goals, and further enhance my professional growth.

Projects

1- Mini-Facebook website

A website that resembles **Facebook** in many features like add friends, follow, unfollow, add new post, and react to these posts and other features.

For front end I used **react.js** to write a reusable components and **tailwindcss** for styling, also i integerated other libraries like **clerck** for handling login, registeration and token, **lucide-react** for icons, **axios** for fetching data and **redux** and **redux toolkit** for management statements

While in back end i used **express.js and node.js** to write code and **mongo** for database management and I used other libraries like **clerck** of authentication and manage user login and logout, **imagekit and multer** for handling images and videos and **inngest** to make functions that sending notifications

Live demo   Source code

2- E-commerce (Full-Stack project)

An e-commerce project that are **full-stack** website, which depends on **react.js** and **bootstrap** for **front.**

I have integrated **js-cookie** for secure handling of API tokens (session and authentication), **redux** and **redux toolkit** for management statements and other libraries like **yup, hookform/resolvers and react-hook-form** for validation and **react-phone-input-2** to select country code, finally integration of **paymob** to enable online payment

and side I used **node.js, express.js** for code and **mongo** for database management I have integerated other libraries like **cookie-parser and jsonwebtoken** for authentication and authorization, **cloudinary and multer** for images management, **bcrypt.js** to encrypt user password and @**sendgrid/mai**l for sending mails in case of confirming orders
